LAB EXPERIMENTS

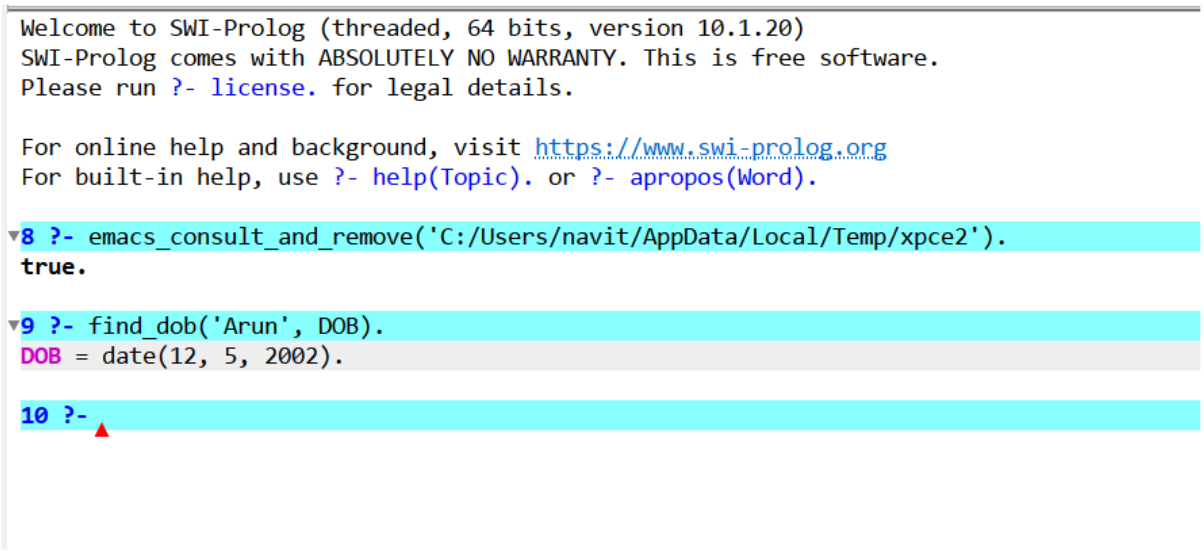

Program 18: Prolog Program for a Database with NAME and DOB

Aim:

To write and execute a Prolog program to create a simple database containing the name and date of birth (DOB) of individuals and retrieve the information using queries.

Algorithm:

1. Start the program.
2. Define database facts containing names and dates of birth.
3. Create a predicate to retrieve the date of birth using a person's name.
4. Create a query to search for a particular person's details.
5. Display the matching name and date of birth.
6. Stop the program.

Result:

Thus, the Prolog program to create a database containing names and dates of birth and retrieve the information using queries was successfully written and executed.
